

Radon Monitoring Kits Order Form

A complete pack for measuring the radon levels in your home or workplace can be purchased here. We offer two different types of measurement, a quick 7-day measurement or a longer term 3-month measurement. The short term measurement can establish whether or not a building is in a high radon area and might require further measurements of the radon level. The 3-month measurement will result in a precise determination of the given radon level.

Both types of measurement packs consist of:

- One or more radon detectors
- A pre-paid return envelope (for UK customers only)
- Instructions on how to use the radon detectors
- Laboratory analysis

After the detectors have been returned and analysed by our partners at Radosure, the results will be sent to you by email.

Please complete the form below (you can do this on screen and then print it out) and post it or fax it back to Triton using the contact information below. If posting your payment with your order, cheques should be made out to Triton Chemicals. On receipt of your order, we will call you to confirm it and, if you have faxed us your form, to take your payment over the phone. You may also email us your requirements to info@triton-chemicals.com.
