

## Company Profile

Triton Chemical Manufacturing Company Limited (Triton) is the exclusive UK distributor of Platon cavity drain membranes which are manufactured in Norway by Isola. Isola was responsible for the development and introduction of cavity drain membranes for structural waterproofing in Europe almost 30 years ago. Triton also manufactures its own range of cementitious and epoxy waterproofing systems for applications where the BBA approved Platon sealed system would not be appropriate, as well as associated products and drainage systems. Triton's concrete waterproofing systems, flooring systems and traditional timber preservation and DPC products are also supplied to a network of approved contractors across the UK. Triton holds British Board of Agrément approval and is a BS EN ISO Quality Assured Company.

Triton's technical team offers a design and specification service, on-site and classroom based training courses and full technical support to its customers. The company is also a RIBA approved CPD provider and a member of the RIBA NBS Plus service for specifiers. Through its website [www.triton-chemicals.com](http://www.triton-chemicals.com), contractors, and specifiers can also access information about all of Triton's products, including health and safety data sheets, product literature and CAD and other drawings of all typical details. Further drawings and project specific advice are available on request. Insurance backed guarantees are available to Triton Approved Contractors through Triton's sister company, the Triton Users Guarantee Company (TUG) for structural waterproofing, timber preservation and damproofing works.

Triton is also an active member of the Property Care Association and the Basement Information Centre and is represented on the BSI review committee for BS 8102 *Code of Practice for the Protection of Structures against Water from the Ground*.
